Doctoral Thesis

Title *Learning with Joint Inference and Latent Linguistic Structure in Graphical Models*

Supervisors David A. Smith and Mark Johnson

Committee 1 Ben Marlin, Andrew McCallum, Joe Pater, and Kristina Toutanova

Committee 2 Tiberio Caetano, Ben Marlin, Luke Zettlemoyer

Description Developed a modeling framework for constructing joint factor graph models of NLP problems, and described how latent combinatorially-constrained syntactic representations can be marginalized over during training to produce task-specific syntactic distributions without the need for treebanks.
